GOHEZOH INTEGRATED SERVICES LTD.

SOFTWARE REVIEW & CORRECTIVE DEVELOPER SPECIFICATION

Updated business rules for delivery bidding, coverage, warehouse fulfillment, recipient OTP and BDO commission transparency

Purpose
Review the uploaded 28-page software handover and convert Gohezoh's latest decisions into clear, testable requirements for the developer.

Prepared for: Gohezoh Integrated Services Ltd. | Audience: Developer, Operations, Finance/Admin and Management

Document status: Business requirements and correction specification. Technical recommendations and items awaiting Management approval are identified separately.

1. Executive summary

The uploaded Gohezoh Software.pdf is a 28-page React/Supabase logistics and fulfillment handover. It already describes customer, partner, job/waybill, payment, settlement, BDO, OTP/POD, dashboard, access-control and audit concepts. However, the document leaves some features as potential or future functionality and does not explicitly define several newly approved business rules.

The revised specification must add: approved coverage corridors; a two-hour partner quote window for local/interstate delivery; automatic lowest-valid-quote selection; customer price = total eligible direct cost ÷ 0.75; Gohezoh-owned warehouse fees; mandatory recipient OTP verification for applicable deliveries; Port Harcourt inbound hub handling and last-mile delivery; and a BDO view of registered partners, successful attributable transactions and commission calculations.

This is a review of the PDF requirements, not deployed source code. It identifies what is absent, unclear or needs confirmation in the handover; it cannot prove whether a feature already exists in the live application.

2. Review of existing software handover

Area / source pages	Existing handover states	Required correction
Business model, pp. 1–2	Customers → Job → Partner → Route → Parcel → Payment → Delivery → Profit.	Add partner quote window, bid selection, customer acceptance and price calculation stages.
Partner module, pp. 10–11	Partner service type, coverage, routes, capacity, costs and status.	Add route eligibility, bid submissions, quote deadline, validity, award status and audit trail.
Customer order process, pp. 13–14	Operations reviews availability/pricing and assigns partner.	For eligible local/interstate delivery, use two-hour bidding and automatic lowest valid quote; retain Operations exception handling.
Pricing/profitability, pp. 11, 16–17	Tracks customer price, partner cost, payment and job profit.	Define total direct cost ÷ 0.75; track other direct costs and rounding; avoid double-counting costs already included in partner quote.
Coverage, pp. 10, 5	Partner coverage/routes and routes entity exist.	Add Gohezoh launch corridor whitelist, disabled locations and Admin-managed activation.
Warehouse, pp. 15, 26	Inventory, storage, picking, packing and delivery integration described.	Specify Gohezoh-owned warehouse, initial rates and workflow. No warehouse partner needed for initial release.
OTP/POD, pp. 11–12, 20–21	OTP/POD fields and general flow exist.	Clarify recipient gives OTP to delivery partner, partner enters it, server verifies it, and delivery cannot complete without success.
BDO dashboard, pp. 21–22	Leads, customers, revenue, partner prospects and targets.	Add My Registered Partners, My Successful Transactions, commission ledger, calculation breakdown and downloadable statement.
Commission, pp. 18–19, 21–22	Activity/revenue tracked, but commission logic not fully specified.	Add versioned per-BDO agreement/rules, eligible transaction basis, pending/approved/paid statuses and adjustments.
Security/audit, pp. 22–23	Role-based access and audit logs are specified.	Extend server-side permissions and audit coverage to bids, price overrides, OTP, attribution and commission changes.

3. Confirmed business rules

- **Initial services:** local delivery, interstate delivery, warehousing and order fulfillment.
- **Initial corridors:** Lagos ↔ Port Harcourt; Lagos ↔ Aba; Port Harcourt ↔ Aba. Umuahia is also a coverage location, but exact permitted route combinations must be explicitly configured.
- **Port Harcourt inbound:** every delivery coming into Port Harcourt must come to Gohezoh for receipt/pickup and last-mile delivery handling.
- **Delivery price:** eligible partners quote in-app; the default window is two hours; the system selects the lowest valid quote and applies total eligible direct cost ÷ 0.75.
- **Warehouse:** Gohezoh operates its own space; no third-party warehouse partner is required initially.
- **Initial customer fees:** ■1,000 per standard processing order; ■2,000 per standard carton/month; carton 40 × 30 × 30 cm, maximum 15 kg.

- **OTP:** recipient provides the code to the delivery partner; partner enters it; backend verifies before delivery completion for OTP-required jobs.
- **BDO transparency:** BDOs can see their registered/attributed partners and successful transactions needed to verify their commission.

4. Coverage controls and Port Harcourt rule

Origin → destination	Initial status	System behaviour
Lagos → Port Harcourt	Enabled	Eligible partners quote; mandatory Gohezoh Port Harcourt inbound handling.
Port Harcourt → Lagos	Enabled	Eligible partners quote.
Lagos → Aba	Enabled	Eligible partners quote.
Aba → Lagos	Enabled	Eligible partners quote.
Port Harcourt → Aba	Enabled	Eligible partners quote.
Aba → Port Harcourt	Enabled	Eligible partners quote; mandatory Port Harcourt inbound handling.
Umuahia	Location enabled; route pairs to be approved	Admin must configure exact permitted origin/destination pairs; do not assume all combinations.
Other locations/routes	Disabled by default	Hidden/disabled in dropdown and rejected by backend until enabled by Admin.

Coverage implementation requirements

- Use controlled origin/destination dropdowns showing only enabled locations and corridors. Filter destination options based on selected origin.
- Admin can add, enable, disable or retire locations/corridors without a code release.
- Backend validation must block unsupported requests even if submitted through a manipulated browser/API.
- Record who changed coverage, when, reason, effective date and previous status.
- Disabling a route must not silently cancel existing accepted jobs; Operations/Admin must record the decision for each affected job.

Mandatory Port Harcourt inbound handling

Any shipment whose destination is Port Harcourt must be flagged 'Gohezoh hub receipt and last-mile required'. Record hub arrival, parcel scan, condition, custody transfer, receipt time and receiving staff. Create/assign the onward last-mile job and complete final delivery using recipient OTP. A partner must not bypass the hub by marking the shipment directly delivered in Port Harcourt unless an authorized Operations/Admin override with a reason is recorded.

5. Two-hour partner bidding and automatic pricing

Required workflow

1. Customer submits local/interstate request with origin, destination, full pickup/delivery addresses, parcel type, dimensions/weight where known, quantity, desired timing and special instructions.
2. System validates the corridor, creates the request/job reference and sets status to Awaiting Partner Quotes.
3. Notify only approved, active partners with matching route, service type and capacity.
4. Start the default two-hour window when the request is published. Save server-side published_at and quote_deadline_at timestamps.
5. Each partner submits a total price, availability confirmation, delivery estimate, inclusions/exclusions and any declared surcharge conditions.
6. Keep bids confidential. Partners must not see competing quotes or bidder identities.
7. At deadline, close bidding automatically and exclude late or invalid quotes.
8. Select the lowest valid quote among eligible partners; save all bids and reasons for any disqualification.
9. Calculate customer price, apply approved rounding, and send the quotation with an acceptance deadline.
10. After customer acceptance and required payment/approved credit terms, award the job to the winning partner and require confirmation within a configurable period.
11. If winner declines or fails to confirm, offer to next-lowest valid bidder if the quote remains valid; otherwise reopen or send to Operations.
12. Keep a complete trail from customer request to quotes, selection, customer quote, payment, partner settlement, delivery and margin.

Pricing formula

CUSTOMER PRICE = TOTAL ELIGIBLE DIRECT COST ÷ 0.75

If the winning partner quote includes every direct cost paid by Gohezoh, use that quote as total eligible direct cost. If Gohezoh separately pays any direct job cost, add it before dividing by 0.75. Do not double-count costs already included in the partner quote.

Example	Amount
Winning partner quote; all direct costs included	■7,500
Other direct costs paid separately	■0
Customer price: ■7,500 ÷ 0.75	■10,000
Gohezoh contribution before overhead/tax	■2,500 (25% of price)
If extra direct costs are ■500	Total cost ■8,000; price ■10,666.67 before rounding

Valid quote requirements

- Submitted before the deadline by an active approved partner eligible for the exact corridor and service.
- Contains NGN amount, availability confirmation, expected service timing, inclusions and exclusions.
- Prices the parcel details and handling requirements disclosed by the customer.
- Any surcharge or limitation must be declared before the deadline. No hidden post-award charge unless customer-approved terms allow it.
- Store quote version, submission timestamp, partner, amount, status and invalidation reason.

Exceptions that must be programmed

- **No bids:** no automatic price; notify Operations for manual outreach, extension or approved manual quote.
- **Tied lowest bids:** use an approved tie-break rule, recommended reliability score then earlier valid submission, or Operations review; record reason.

- **Winner declines:** offer to next-lowest valid bid or escalate.
- **Expired/invalid bids:** exclude and retain audit record.
- **Customer rejects or quote expires:** mark quote rejected/expired; do not confirm the job.
- **Material order change:** route, address, parcel size/weight, service speed or handling change triggers re-quote/reconfirmation and customer approval.

6. Gohezoh-owned warehouse and fulfillment

The existing PDF already outlines inventory → order → pick → pack → delivery. The corrected model makes Gohezoh the warehouse operator for the initial release and removes any dependency on third-party warehouse partners.

Service / rule	Initial customer price	Definition
Order processing	■1,000 per order	Recommended initial scope: one order of up to five units/items.
Carton storage	■2,000 per carton/month	Standard carton 40 × 30 × 30 cm; max 15 kg.
Picking	Included in processing fee	Pick up to five units/items from Gohezoh inventory.
Basic packing	Included in processing fee	Use customer-provided or no-additional-cost packaging.
Packaging materials purchased for order	Separate charge	Show and obtain acceptance of charge before processing.
Dispatch / interstate delivery	Separate quote	Use partner bidding formula; not included in processing fee.
Returns processing	Suggested ■500 per returned order	Transport excluded; requires Management approval before launch.
Oversize/heavy/special handling	Approved surcharge/manual quote	Show charge before work begins.

The five-item limit and ■500 returns fee are recommendations in this corrective document, not previously confirmed Gohezoh policies. Approve or change them before configuration.

The ■1,000 processing fee includes

- Receive and record the order; check details against inventory.
- Pick up to five units/items.
- Basic packing using customer-provided or no-additional-cost packaging.
- Update order and inventory status.
- Prepare dispatch instruction, hand parcel to delivery partner and record tracking/dispatch reference.

Not included in the processing fee

- Carton storage; transport/delivery; packaging materials bought specifically for the order; returns transport; special handling; oversized/heavy orders; extra units or multiple parcels beyond the defined scope.
- Any surcharge must be displayed and accepted before it is charged.

Warehouse workflow

1. Record inbound inventory by customer, SKU/product, quantity, carton count, condition and receipt date.
2. Assign storage location and retain stock movement history.
3. Receive order; check/reserve stock; show applicable processing, storage, packaging and delivery fees.
4. Pick items and record quantity, staff and time; pack and record parcel details.
5. Create linked delivery job and update inventory on actual movement.
6. For Port Harcourt-bound goods, record Gohezoh hub receipt and onward last-mile job.
7. Close fulfillment after dispatch and applicable delivery confirmation.

Margin guardrail: to retain a 25% contribution margin, direct cost on a ■1,000 processing charge should not exceed ■750. Direct cost per ■2,000 carton-month should not exceed ■1,500. These are targets to test against actual operating costs.

7. Recipient OTP and proof of delivery

The uploaded PDF already mentions OTP/POD. Clarify and enforce this flow for OTP-required deliveries:

1. When the job reaches the appropriate delivery stage, generate a one-time code and send it to the recipient's registered phone via the approved notification channel.
2. The recipient gives the code to the delivery partner. The partner must not be able to see or generate the correct code in advance.
3. Partner enters the recipient-provided OTP in the partner dashboard/app.
4. Backend checks job, recipient, expiry and unused status. Only successful verification permits the job to transition to Delivered.
5. Record verification timestamp, partner/user, attempts and outcome; record POD and notify customer.
6. If code is wrong, expired or unavailable, keep job undelivered and follow the authorized exception process.

OTP security controls

- OTP must be random, single-use and expire after a configurable period.
- Limit attempts and temporarily lock verification after the configured limit; route to Operations.
- Do not store readable OTP values in logs; use secure verification storage where feasible.
- Resend only through authorized flow and log each resend.
- A partner clicking Delivered or uploading a photo alone must not satisfy OTP-required delivery.
- Manual exception completion requires authorized role, reason and audit log.
- Default proposal: one OTP per delivery/job; explicitly define handling if a shipment is split across multiple deliveries.

Recommended status flow

Order Received → Awaiting Quotes → Quote Sent → Customer Accepted → Partner Awarded/Confirmed → Pickup Scheduled → Picked Up → In Transit → Out for Delivery → OTP Verified → Delivered → POD Recorded → Job Closed.

8. BDO partner visibility and commission transparency

The current handover includes BDO activities and a dashboard, but does not explicitly require a transaction-level commission ledger. Add this as a first-class feature, not merely a total on the dashboard.

BDO dashboard sections

Section	Required fields / behaviour
My Registered Partners	Partner ID, business name, category, coverage, date registered, status, approval status and attribution owner.
My Successful Transactions	Job ID/date, service, route, permitted customer/account reference, completed status, amount actually collected, eligible costs where authorized and attribution type.
My Commission	Applicable plan/agreement, basis, eligible amount, rate/tier, earned, pending, approved, paid, reversals/adjustments and payment reference.
Commission statement	Date filters, partner/service filters where permitted, downloadable statement and transaction-by-transaction breakdown.
Disputes/corrections	Raise a query against a transaction or commission line; see status, response and resolution history.

Attribution rules

- Store partner registration/development BDO separately from customer acquisition BDO; the two may differ.
- Each attribution record must have owner, type, effective date, approval status and history.
- Do not assume every transaction through a registered partner automatically earns commission. Apply the relevant BDO's signed agreement.
- If multiple BDOs claim attribution, Admin makes a recorded decision; do not silently overwrite past attribution.

- Commission eligibility may require completed delivery and customer funds actually collected, subject to the individual agreement. Refunds/reversals must be reflected.

Commission calculation

Do not hard-code one universal percentage because BDO agreements may differ. Store versioned commission plans with effective dates and clear calculation basis.

Basis	Configurable example
Eligible collected revenue	Commission = eligible customer cash collected × agreed rate.
Contribution/profit	Commission = eligible contribution amount × agreed rate, if the signed agreement defines contribution.
Fixed per qualifying transaction	Commission = qualifying transaction count × agreed amount.
Tier/target arrangement	Apply the individual agreement's thresholds and rates to reconciled qualifying activity.

Each ledger line should reference BDO, partner if relevant, job, payment, attribution type, commission plan/version, eligible amount, rate/tier, calculated amount, status, calculation time, reviewer, payment reference and any reversal/dispute. Statuses should include Pending eligibility, Calculated, Under review, Approved, Paid and Reversed/Adjusted. Keep history; do not delete original lines.

Permissions

- BDOs see only their own/authorized partners and attributable transaction/commission records.
- Show enough calculation detail for the BDO to reproduce the figure, but do not expose another BDO's commission, partner bank details, confidential competing bids or unrelated customer data.
- Finance/Admin reconciles and approves; BDOs cannot edit or approve their own commission.
- Enforce permissions in Supabase/PostgreSQL Row Level Security and server-side functions, not only by hiding React screens.

9. Role permissions and data model changes

Role	Revised access
Customer	Own orders, quotes, acceptance, payment, tracking, inventory/fulfillment and delivery records.
Logistics partner	Eligible quote requests; own bids; awarded jobs; necessary pickup/delivery details; OTP entry; POD; own settlement status as authorized. No competitor bid visibility.
BDO	Assigned prospects/customers, registered/attributed partners, permitted completed transactions and own commission ledger. Cannot change prices, bids, settlements or commission calculations.
Operations	Jobs, bids/award workflow, coverage eligibility, hub receipt, route, delivery exceptions, OTP/POD and closure.
Finance/Admin	Payments, settlements, commission reconciliation and approvals according to permissions.
Super Admin/Management	Coverage, pricing rules, partner approvals, commission plans, role permissions, exceptions and audit.

Recommended tables/entities to add or refine

Entity	Purpose
coverage_locations	Canonical location, region/state, enabled flag and audit metadata.
coverage_corridors	Origin/destination, service type, enabled status, effective dates and change reason.
partner_route_coverage	Partner's eligible corridors/services and active status.
partner_quotes	Job/request, partner, amount, inclusions/exclusions, estimate, submission time, status, version and rejection reason.
quote_windows	Published/deadline/closed timestamps and outcome.
pricing_calculations	Winning quote, extra direct costs, margin target, formula version, unrounded/rounded price and contribution.
warehouse_inventory / stock_movements	Customer-owned stock, SKUs, location, receipt, pick, pack, dispatch and adjustments.
fulfillment_orders	Customer order, lines, processing/storage/material fees, pick/pack status and linked delivery job.
hub_receipts / custody_events	Port Harcourt inbound receipt, condition, time, receiving staff and onward last-mile link.
partner_attributions	Partner, BDO, attribution type, effective date, approval and history.
commission_plans	BDO/group, basis, rate/tier, effective dates, qualifying conditions and version.
commission_ledger	BDO, job/payment, eligible amount, calculation, status, payment and adjustment links.
audit_logs	Actor, role, action, entity, timestamp, reason and before/after values where appropriate.

Retain existing entities and human-readable references (e.g., JOB-00001, PRT-0001, PAY-00001) alongside internal UUIDs. Developer should produce updated ERD and migration plan before building screens.

10. Dashboard and notification changes

- **Customer:** request received, bidding deadline, quote ready/expiry, acceptance/payment, partner confirmation, Port Harcourt hub receipt, delivery tracking, OTP/POD and fulfillment updates.
- **Partner:** eligible open quote requests, countdown, required parcel/route data, own quote status, awarded jobs, pickup/delivery actions, OTP entry, POD and own settlement status.
- **Operations:** awaiting bids, time remaining, bid count, lowest valid bid, no-bid/tie/invalid cases, Port Harcourt hub receipts, OTP exceptions, pending POD and disabled-route attempts.
- **BDO:** My Registered Partners, My Successful Transactions, commission ledger, date filters, calculation detail, downloadable statement and dispute status.

11. Acceptance tests before release

ID	Test	Expected result
AT-01	Customer tries disabled corridor	UI and backend block it; no bid window.
AT-02	Admin enables corridor	Allowed choices update; action is audited.
AT-03	Destination is Port Harcourt	Hub receipt and last-mile flag required; bypass blocked without authorized override.
AT-04	Three eligible partners bid	Bids stay confidential; lowest valid quote wins at deadline.
AT-05	Bid arrives late	Excluded and logged as late.
AT-06	Winning quote ■7,500, all costs included	Price is ■10,000 before rounding.
AT-07	■7,500 quote plus ■500 direct cost	Price is ■10,666.67 before rounding.
AT-08	No bids received	No invented price; Operations exception.
AT-09	Winner declines	Next valid bid offered or escalated; history retained.
AT-10	Valid recipient OTP entered	Server verifies; delivery can complete; POD recorded.
AT-11	Wrong/expired OTP	Delivery blocked; attempts logged.
AT-12	BDO opens partner list	Only own/authorized registered partners visible.
AT-13	Qualifying transaction paid/complete	Commission line follows applicable plan and links to job/payment.
AT-14	Refund reverses eligible revenue	Linked adjustment/reversal created; original retained.
AT-15	BDO edits commission/other BDO record	Server denies and logs attempt.
AT-16	Five-unit fulfillment order	■1,000 processing fee plus applicable storage/material/delivery.
AT-17	Order exceeds standard scope	Surcharge/manual quote shown before processing.
AT-18	Coverage or commission rule changes	Versioned/audited; old transactions retain applied version.

12. Implementation priorities

Priority	Work	Reason
P0 — Launch blocker	Coverage whitelist; quote timer and lowest-valid-bid logic; direct-cost formula; Port Harcourt inbound rule; OTP verification; essential audit logs.	Core operating model and delivery controls.
P0 — Financial transparency	Payment/settlement traceability; BDO partner attribution; transaction-linked commission ledger and access controls.	Prevents commission disputes and supports reconciliation.
P1 — Warehouse	Inventory, storage billing, processing fee, picking/packing/dispatch and linked delivery job.	Supports Gohezoh-owned fulfillment.
P1 — Dashboards	Partner, Operations, customer and BDO views; reports and exception queues.	Supports daily operations.
P2 — Expansion	New corridors, size/weight tiers and additional services by configuration.	Allows growth without redesign.

13. Decisions Management must confirm

1. **Umuahia:** exact permitted origin/destination combinations. The location is included, but every route pairing is not yet specified.
2. **Urgent jobs:** whether all jobs use two hours or urgent local jobs can use a shorter configurable window.
3. **Price rounding:** nearest ■100, ■500 or another approved increment.
4. **Payment:** full payment before partner award/dispatch or approved credit terms for selected business accounts.
5. **Processing scope:** approve the proposed five-unit limit and included pick/pack/dispatch-preparation activities.
6. **Returns fee:** approve or change the suggested ■500 per returned order, transport excluded.
7. **Storage billing:** partial-month rules and when billing starts/stops.
8. **OTP:** whether mandatory on every delivery or on all deliveries by default with authorized exceptions.
9. **BDO commission plans:** provide each signed agreement, formula, rate/tier, eligibility, effective date and refund/cancellation treatment.
10. **Attribution:** whether commission is tied to partner-sourced business, customer-sourced business or both, and how conflicting claims are resolved.

14. Developer delivery checklist

- Return updated ERD, screen/workflow list, database migration plan, implementation estimate and unresolved questions before coding.
- Coverage can be enabled/disabled by Admin without code changes; backend enforces it.
- Two-hour bid timer is server-side; quotes are confidential; selection and pricing are reproducible and audited.
- Port Harcourt inbound hub receipt and last-mile handling is demonstrated.
- Warehouse uses Gohezoh-owned space and does not require a warehouse partner account.
- Recipient OTP flow demonstrates valid, wrong, expired, resend and exception cases.
- BDO can see registered partners, qualifying transactions and commission detail but cannot edit financial records.
- Finance/Admin can reconcile customer payment, partner settlement and commission.
- Row Level Security/server-side authorization tests pass for each role.
- Acceptance tests AT-01 to AT-18 pass in staging with evidence; deployment includes backup, monitoring and rollback plan.

15. Final instruction to developer

Treat this document as an extension and correction to the existing Gohezoh Software Development Handover. Preserve the existing customer, job, parcel, partner, payment, settlement, BDO, OTP/POD, audit and access-control structure. Update the workflows, data model, screens and server-side permissions to support these business rules.

Before implementation, submit the updated ERD, screen/workflow list, migration plan, estimate and Management questions from Section 13. Do not treat a screen mock-up as completion: coverage validation, quote selection, pricing, OTP verification and commission calculation must be enforced server-side and testable.

Operating principle: Customers come to Gohezoh. Partners work through Gohezoh. Operations controls jobs. Gohezoh owns the customer relationship, pricing, records, communication and settlement.

Source reviewed: Gohezoh_Software.pdf, 28 pages. Section 2 references the existing handover's page numbers. This document distinguishes existing source requirements from new decisions, implementation recommendations and questions requiring Management approval.

ADDENDUM - CURRENT TRANSPORT PRICING POLICY

Kwik-Parsel / Gohezoh Integrated Services
Effective specification update: 2026-10-13

This addendum supersedes the driver-transport customer-price formula in the corrective specification, including the eligible direct cost / 0.75 formula and the 25% contribution example. It does not change warehouse fee policy.

PARTNER-SIDE TRANSPORT FEE

For each eligible driver, rider, or transport-partner delivery leg, Gohezo retains 20% of that leg's accepted and collected charge from the partner settlement. The partner sets its customer-facing bid knowing this deduction. The customer is shown the accepted quote; no separate 20% platform fee is added to the customer price.

Example: on an accepted and collected NGN 100,000 leg, the platform fee is NGN 20,000 and partner net payable is NGN 80,000 before separately agreed adjustments. Show the gross charge, fee, adjustments, and net payable to the partner before award acceptance and in settlement history.

Apply the fee once per eligible completed transport leg, not repeatedly to the whole-job amount. Do not accrue it on an unaccepted quote, an unperformed or cancelled leg, or an uncollected amount. Preserve refunds and corrections as linked ledger adjustments. Multiple legs use each leg's own accepted amount.

Do not stack the former / 0.75 pricing formula on this fee. Any separately applicable service charge must be disclosed in the quote and accepted before commitment. This platform fee is separate from BDO/marketer commissions and from warehouse, packaging, and other approved service fees.

IMPLEMENTATION NOTE

This is a business-policy update. Update and test quote, award, fee-ledger, refund, and partner-settlement behavior before enabling it for live awards. The ordered core logistics scope and acceptance criteria are in docs/RENOVATION_SPEC.md and docs/CORE_FEATURES.md.
